

Meeting 2017-11-15

Present: Josefin, Lisa, Adam, Oscar, Rasmus

The next week's schedule:

- Tuesday: 13-15
- Wednesday: 8-17
- Thursday: 13-17

How do you feel about the group?

The group feels the discussions are improving and inclusive. We like the fact that we're working together, maybe not the most time efficient way but everybody understand the work

Have you run into any problems?

The Strategy/Mission components - we're not sure how we want to implement these just yet. There are also some question marks regarding the RewardPoints component, for instance how it's supposed to talk to the Area component (which classes). We have changed the meaning of a Strategy, to easier handle different constraints on mission.

What progress have you made?

We have done some great progress on the class diagrams. We have almost covered the whole model.

Discuss last week's assignment

Assignment 1: We need to update the use case diagram and also add the responsables/controllers. Besides that we did not get much feedback, everything else seemed alright with the supervisor (although possibly more explanations and clarifications)

Room bookah

Josefin is bookah

Questions for the next supervision

- We've already started to think about changes for the component diagram
- Should we consider order and/or unordered mission lists?

Tack och hej leverpastej
