

# ELEVATE

The Retrofittable Standing Desk Converter

MEAM Senior Design Day Presentation

April 24, 2023

Griffin Addison   Darrion Chen   Jonathan Lee

# standing desk

*noun*

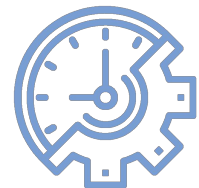

a desk that can be used to work comfortably while sitting or standing

\$9.5 billion market size by 2028  
50% expected growth<sup>[1]</sup>

Improves posture  
Reduces neck and shoulder pain  
Improves vitality  
Reduces stress<sup>[2,3]</sup>

Increases productivity<sup>[3]</sup>

# The Problem

The Full Standing Desk

The Standing Desk Converter

**Expensive**

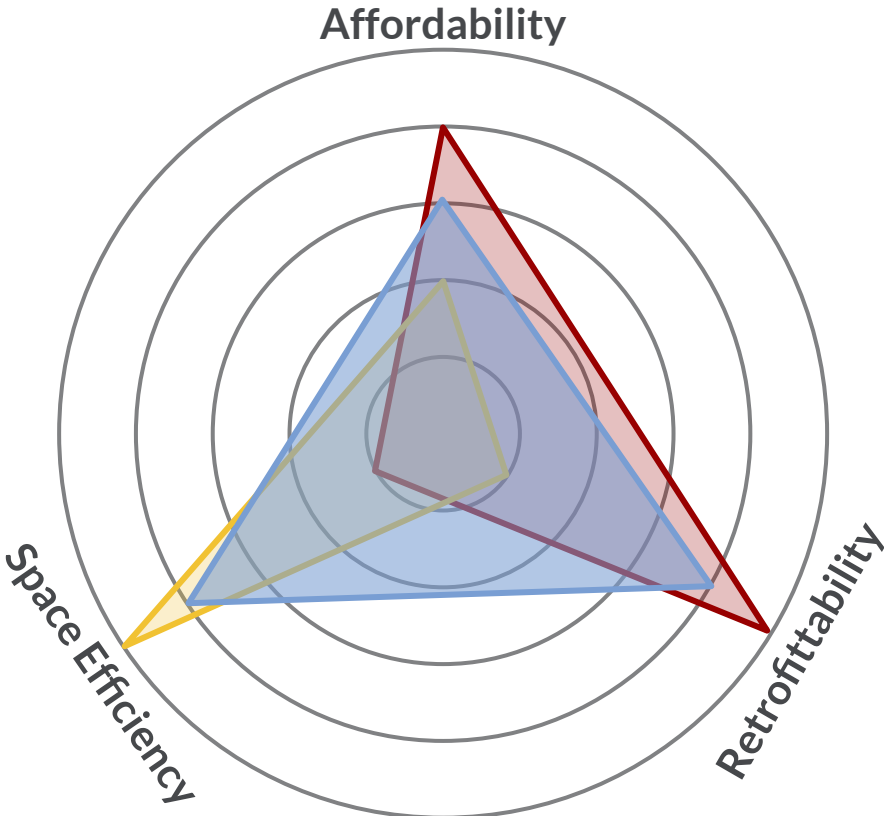

**Lack of Portability**

**Space Inefficient**

# Competition Comparison

— **ELEVATE**

# Our Advantage

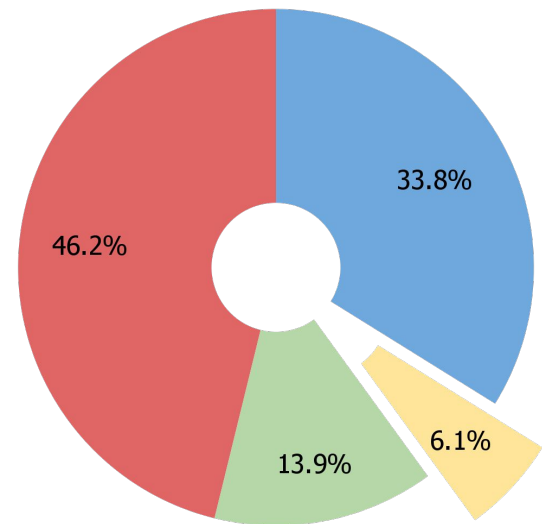

## ELEVATE

Volume (in <sup>3</sup> )	20" x 22" x 10" *	36.6" x 23.1" x 6.25" <sup>[5]</sup>	72" x 30" x 25.5" <sup>[4]</sup>
Weight (lb)	30	43.5 <sup>[5]</sup>	50 <sup>[4]</sup>
Space Efficient	Yes	No	Yes
Retrofittable	Yes	Yes	No
Easy to Install	Yes	Yes	No
Cost (\$)	250	300 <sup>[5]</sup>	889 <sup>[4]</sup>

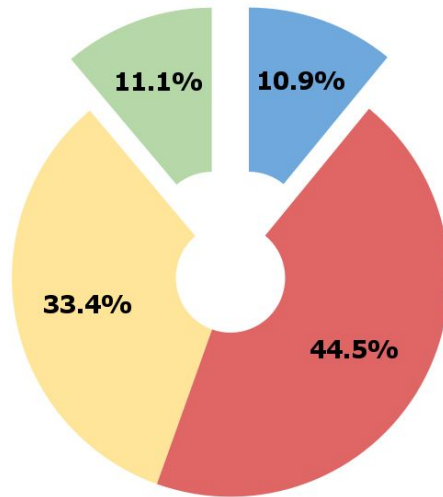

# Potential Markets

Where College Students Have Used Standing Desks

● Office/Work ● Dorm ● Home ● Never Used

Reasons College Students Don't Have Standing Desks

● I like sitting at my desk ● Too expensive ● Annoying to transport and store  
● I don't spend enough time at my desk

# System Characteristics

## FUNCTIONAL

300lb at ½" / sec  
1.5' adjustability

## AFFORDABLE

< \$300

## RELIABLE

Load cycling  
IP62 rating  
UL consumer product  
ratings

## USER-FRIENDLY

< 40 lbs  
Space efficient  
Intuitive to install

## UNIVERSAL

Works for majority of  
desks

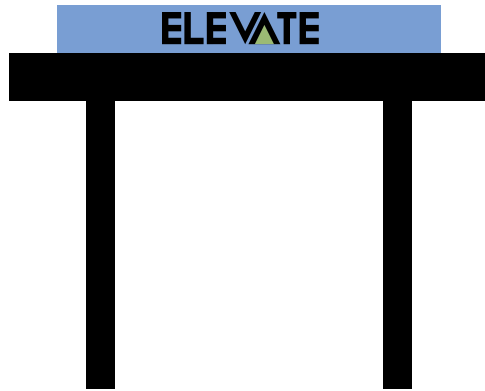

## SAFE

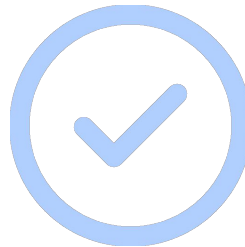

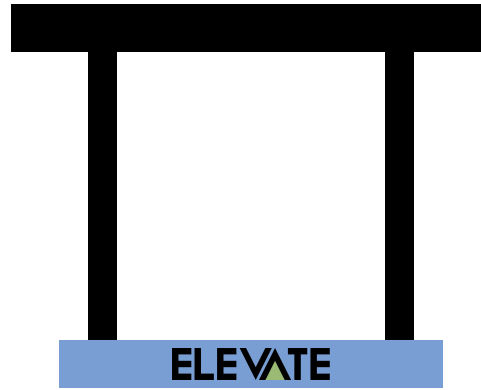

No backdriving  
Rigid  
Stable

# Concept Selection

## Current vs Load

Effect of Vertical Load on Motor Current Draw

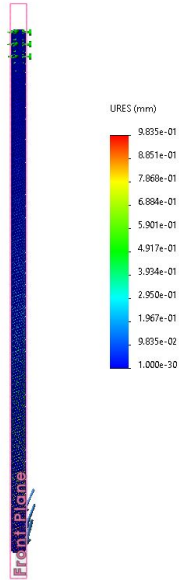

# Full Standing Desk Cost Breakdown

Item	Units	Dimensions	Purpose	Total Cost
Bamboo Wood Sheet	1	36" x 24", 6 square feet	Table Top	\$99.99
30W Electric Motor	2	N/A	Lifting Mechanism	\$48.12
12V Power Supply	1	N/A	Power	\$12.99
Square Steel Tube	4'	2.5", 0.083" Thick	Outer Telescoping Leg	\$71.24
Square Steel Tube	4'	2", 0.065" Thick	Inner Telescoping Leg	\$22.52
Steel Sheet	2' x 2'	0.135" Thick	Bracket Pieces	\$47.20
Square Steel Tube	6'	0.75", 0.083" Thick	Frame	\$15.58
Motor Controller	1	N/A	Lifting Mechanism	\$20.79
Microcontroller	1	N/A	Control Panel	\$9.95
Tactile Switch	6	N/A	Control Panel	\$3.48
Steel Sheet	2' x 2'	0.135" Thick	Feet	\$47.20
Stainless Steel Lead Screw	4'	1/2" Diameter	Lifting Mechanism	\$71.16
Worm Gear	2	N/A	Lifting Mechanism	\$29.76
Metal Housing	2	N/A	Lifting Mechanism	\$30
Plastics & Miscellaneous	1	N/A	Miscellaneous	\$40
<b>Total</b>				<b>\$569.98</b>
<b>Profit Margin</b>				<b>\$80.02</b>

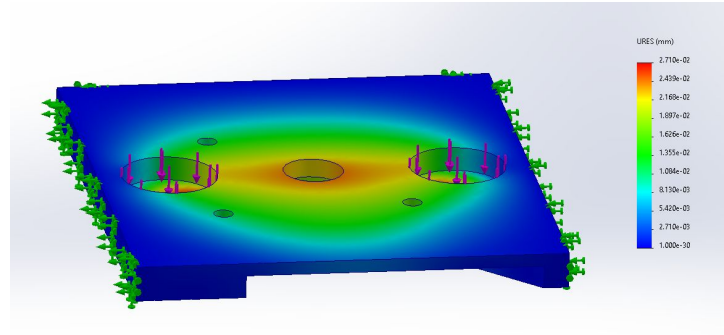

# Linear Actuation Mechanism Selection

	Lead Screw	Hydraulics	Pneumatics	Rack and Pinion	Scissor Lift	Cascade Lift
Cost	✓	✗	✗	✓	✗	✓
Reliability	✓	✗	✗	✗	✓	✗
Complexity	✓	✗	✗	✓	✗	✗
Resolution	✓	✗	✗	✓	✓	✓
Packaging	✓	✗	✗	✗	✗	✓
Safety	✓	✗	✗	✗	✓	✗

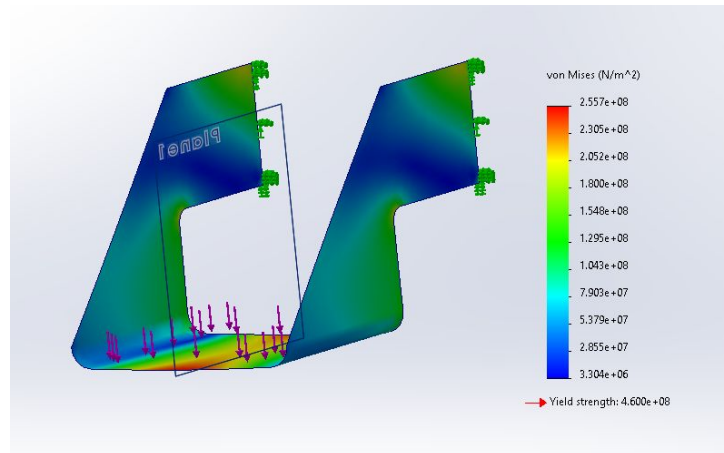

# Finite Element Analysis

**Lead Screw**  
Stiffness-limited  
part

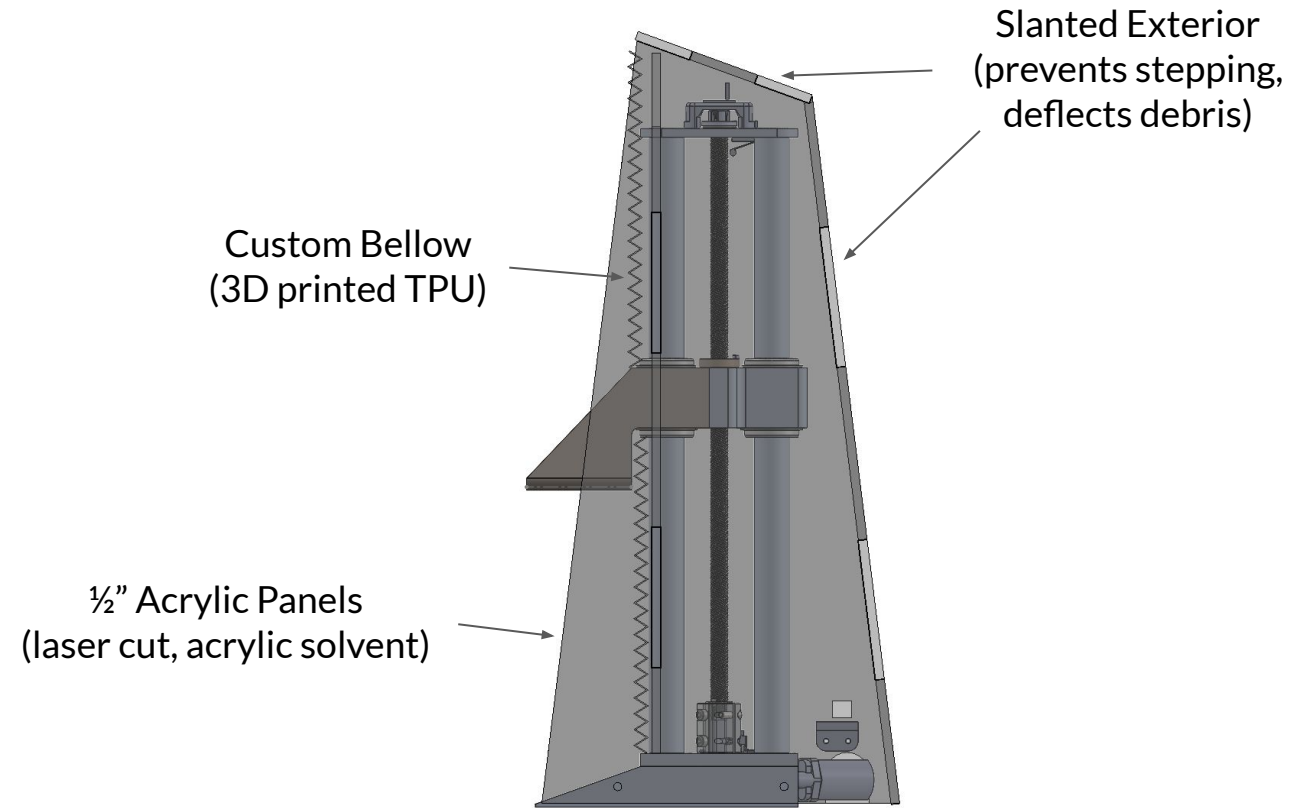

**Baseplate**  
Stiffness-limited part

**Leg Holder**  
Strength-limited part  
  
Load about ½ of yield  
strength. Fatigue not a  
worry

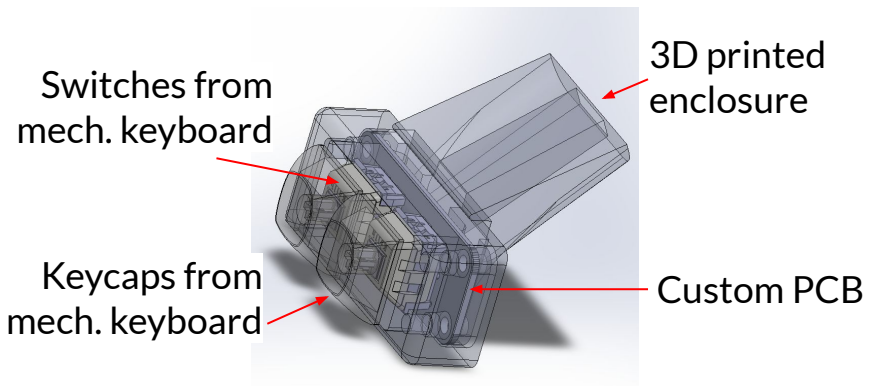

# Enclosure

# Peripherals

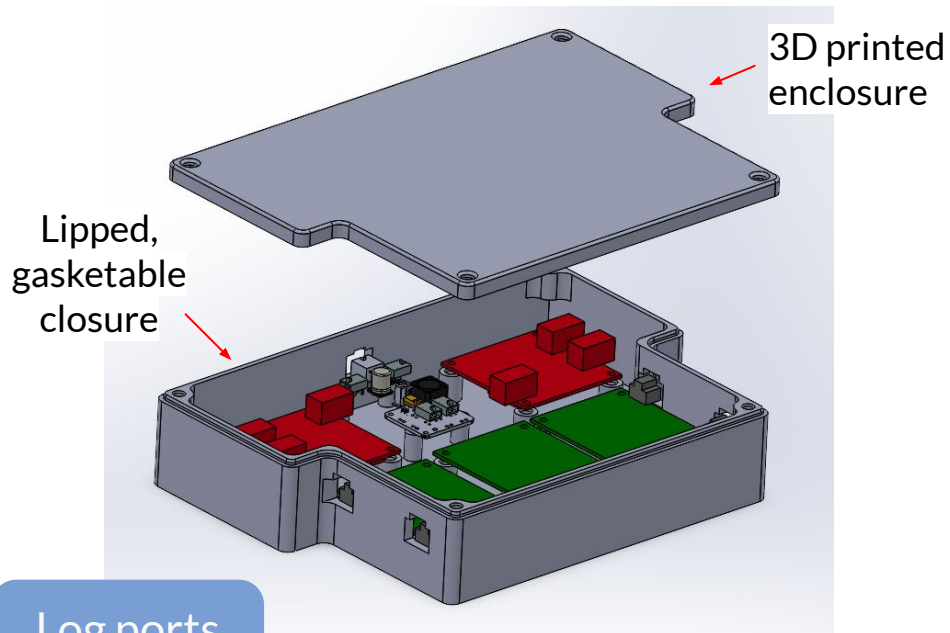

## Control Panel

button controls | mounted on desk

## Board Box

houses main boards | mounted under desktop

Log ports for cables

# Lift Prototype

## 3D Print Prototype

### Learnings:

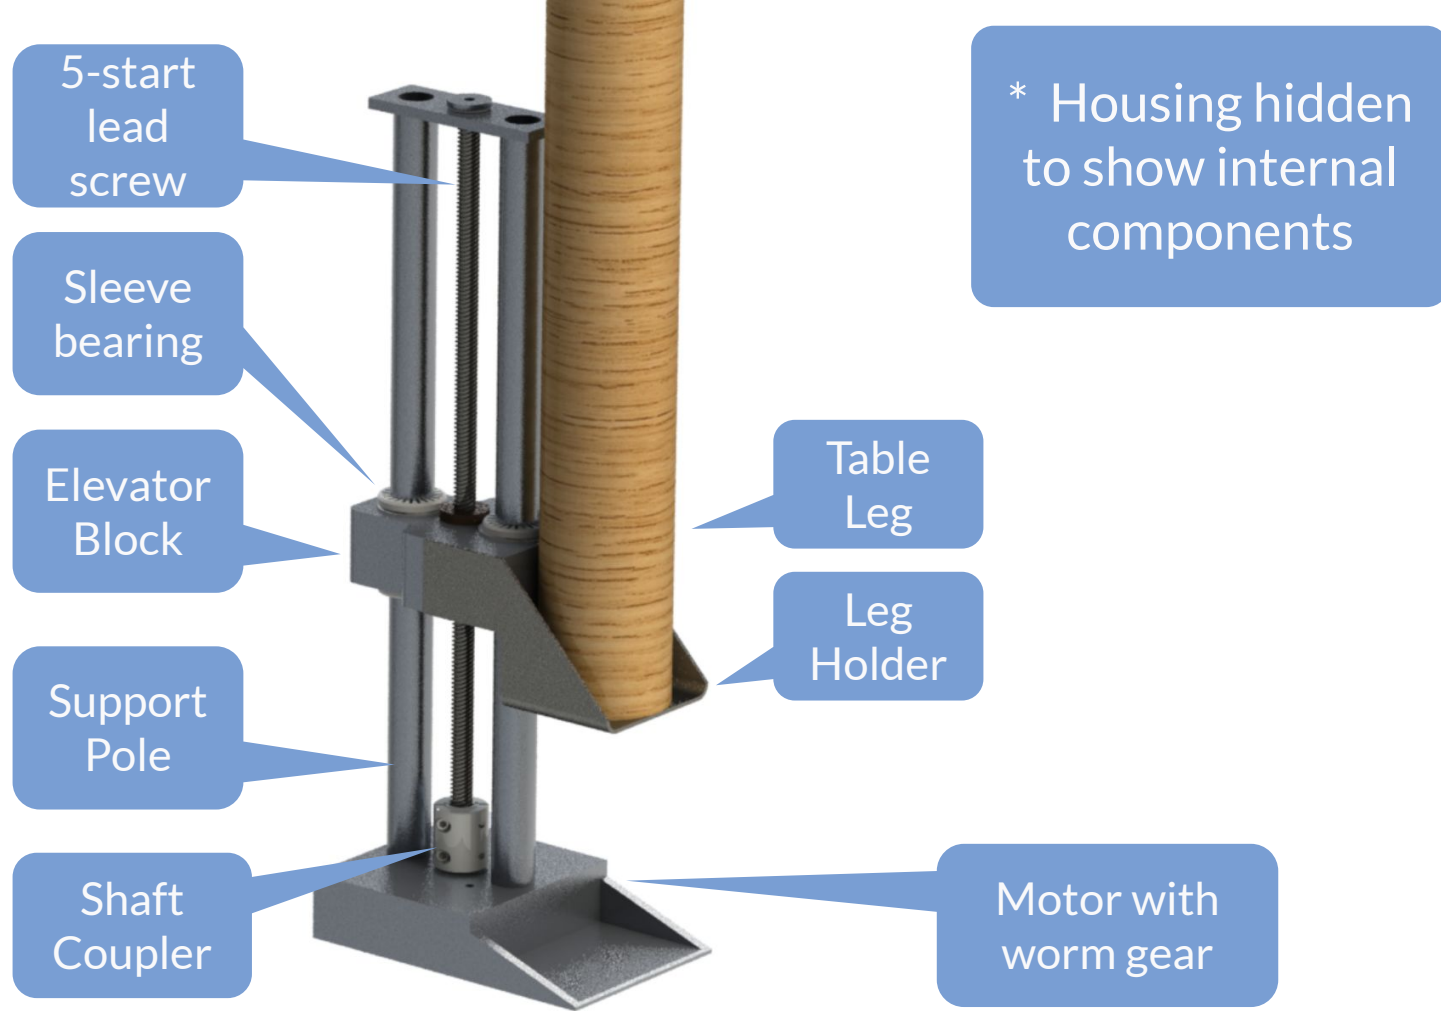

- Lift system, electronics, software worked
- Bad 3D print tolerances => high sliding friction
- Motor protruding from side was awkward packaging

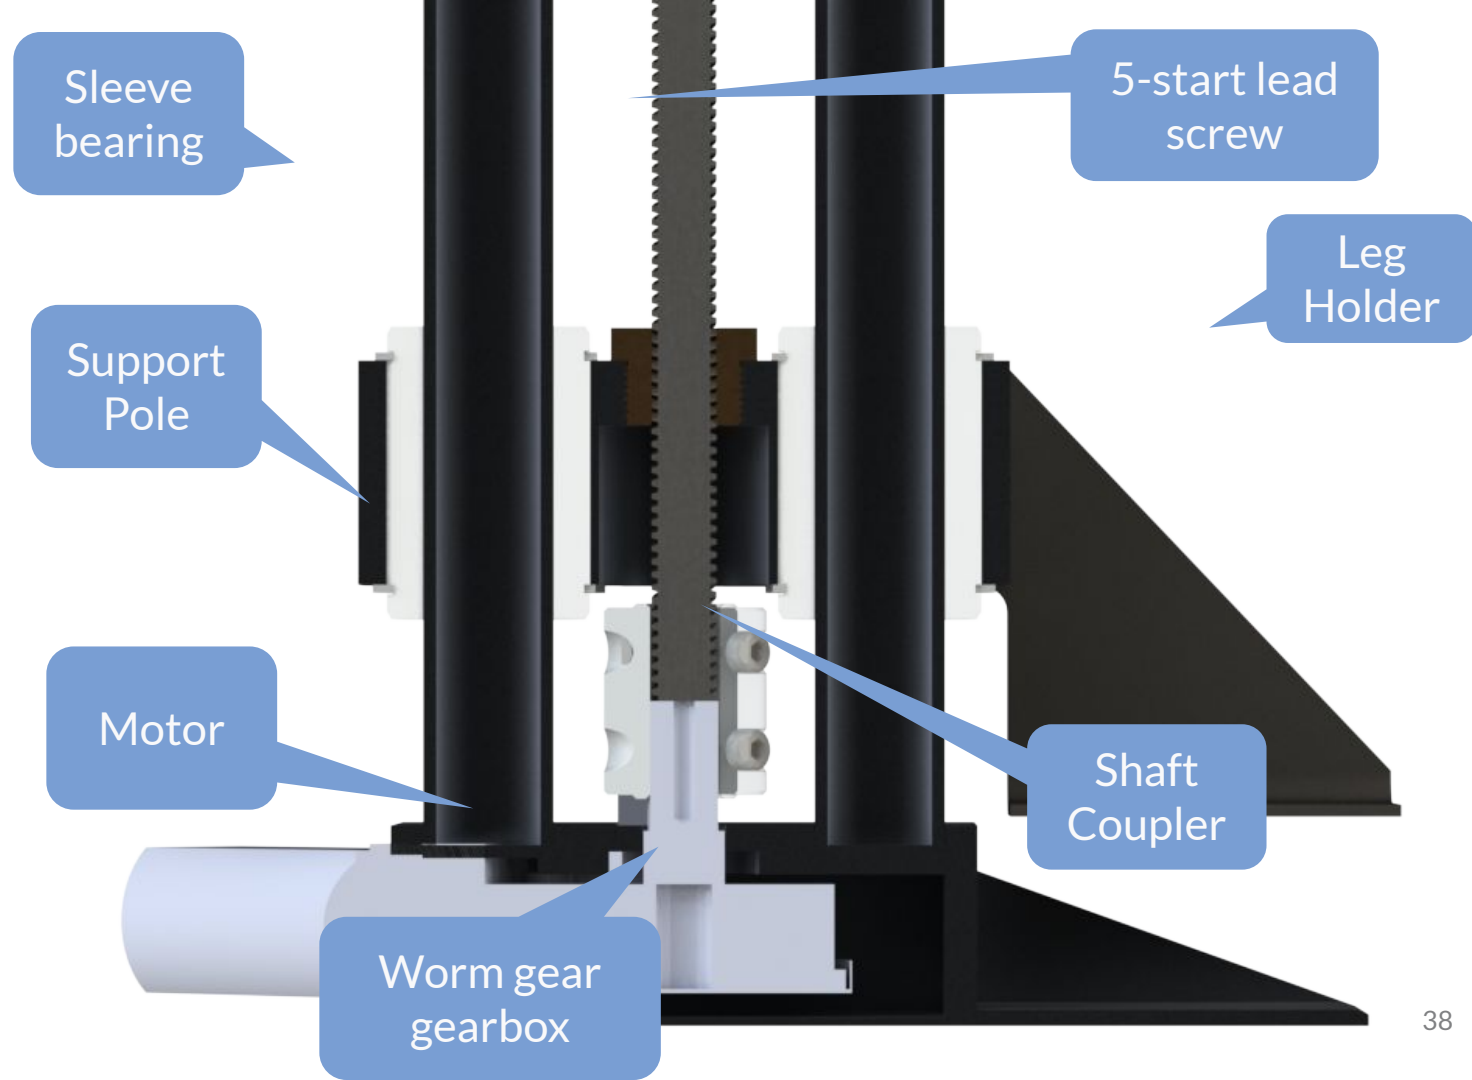

## Aluminum Prototype

### Learnings:

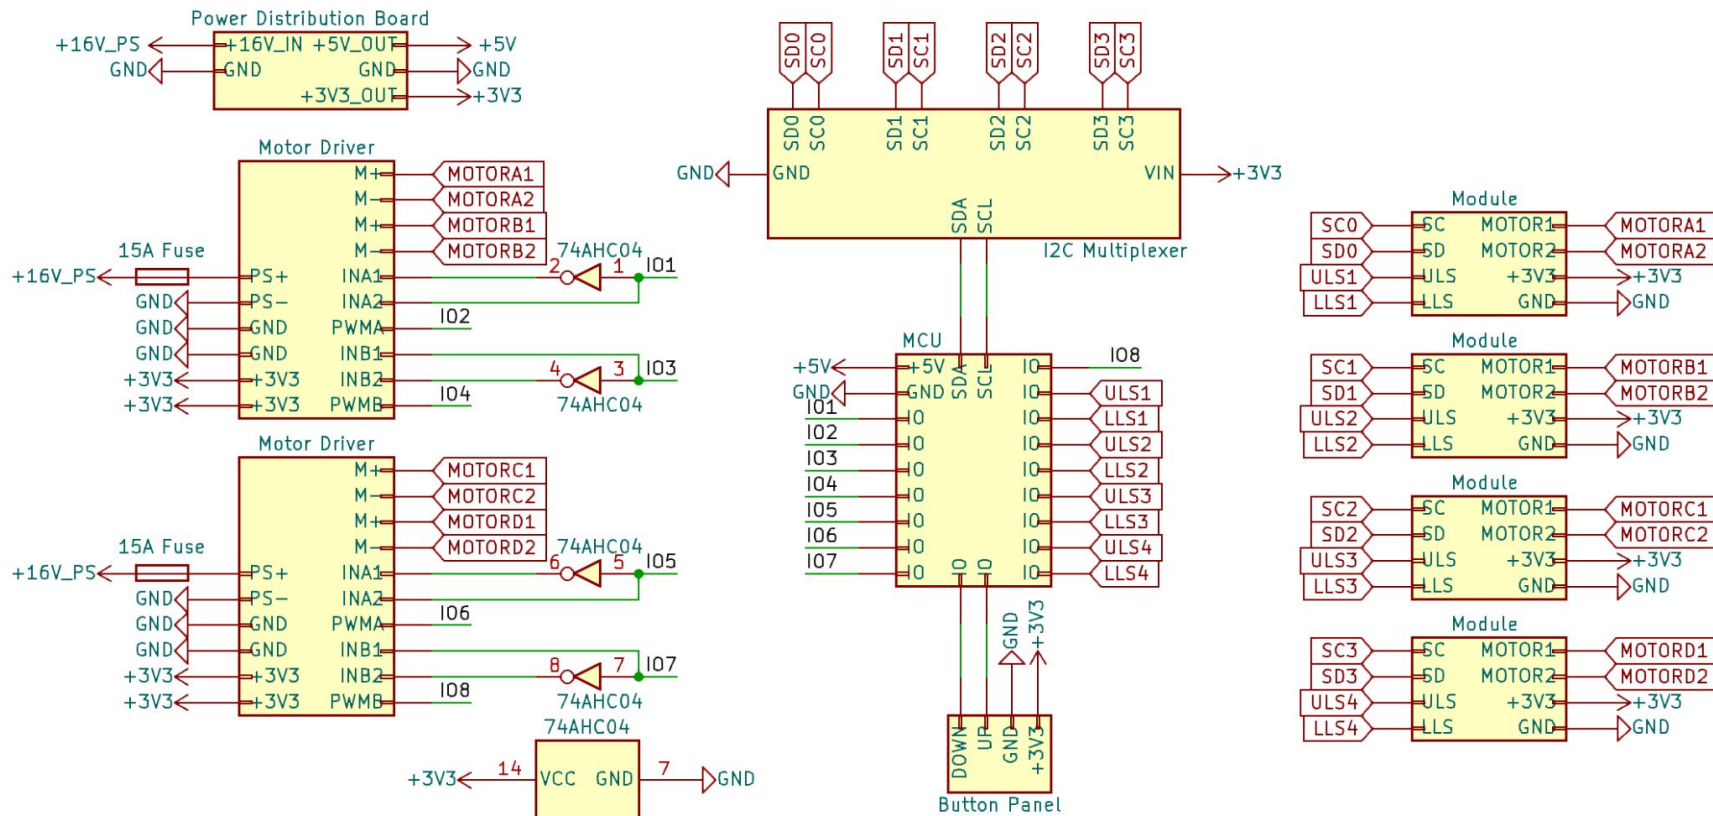

- Better tolerances => low friction!
- Long wires => more noise
- Very strong (watch your fingers)

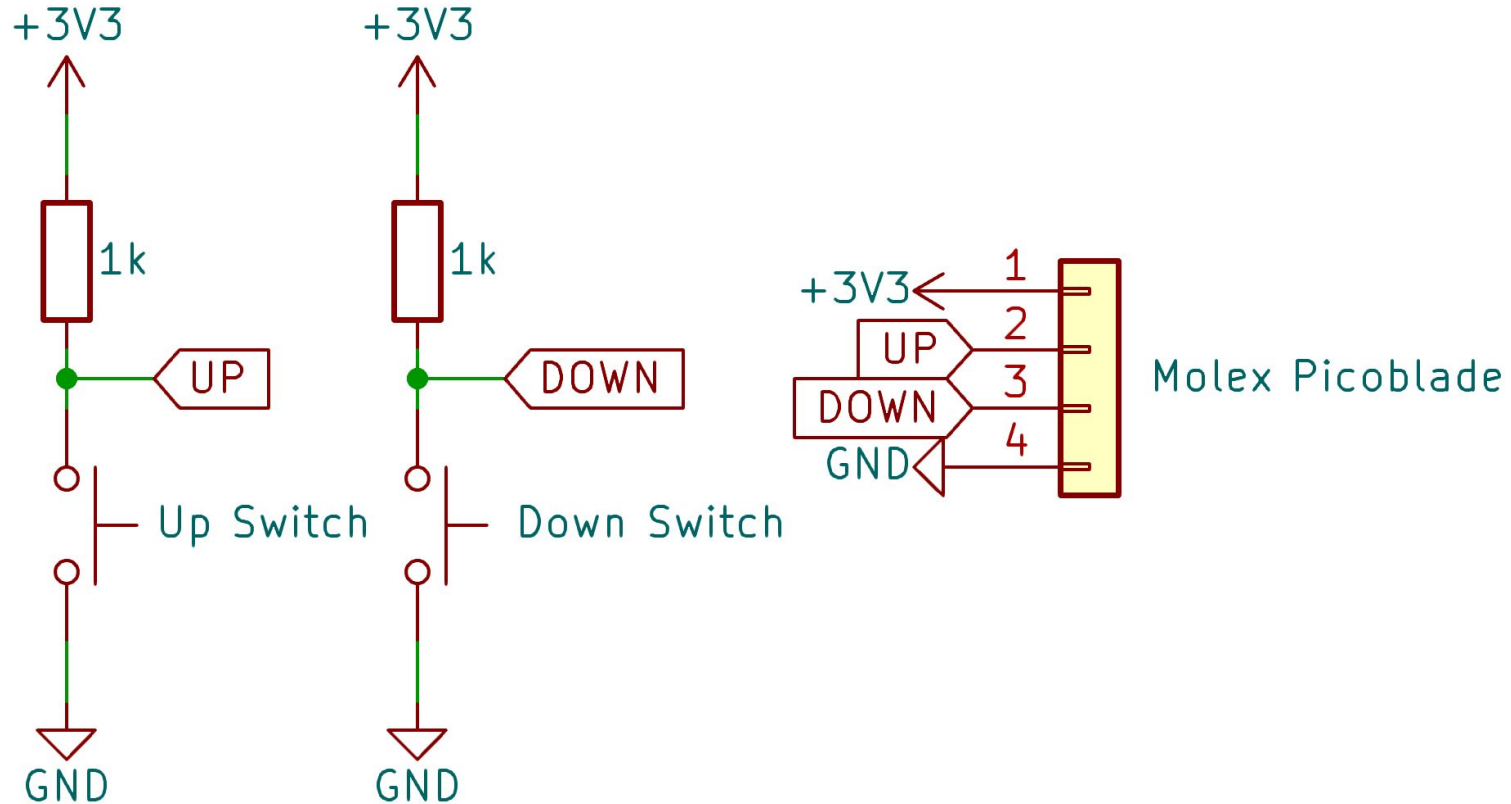

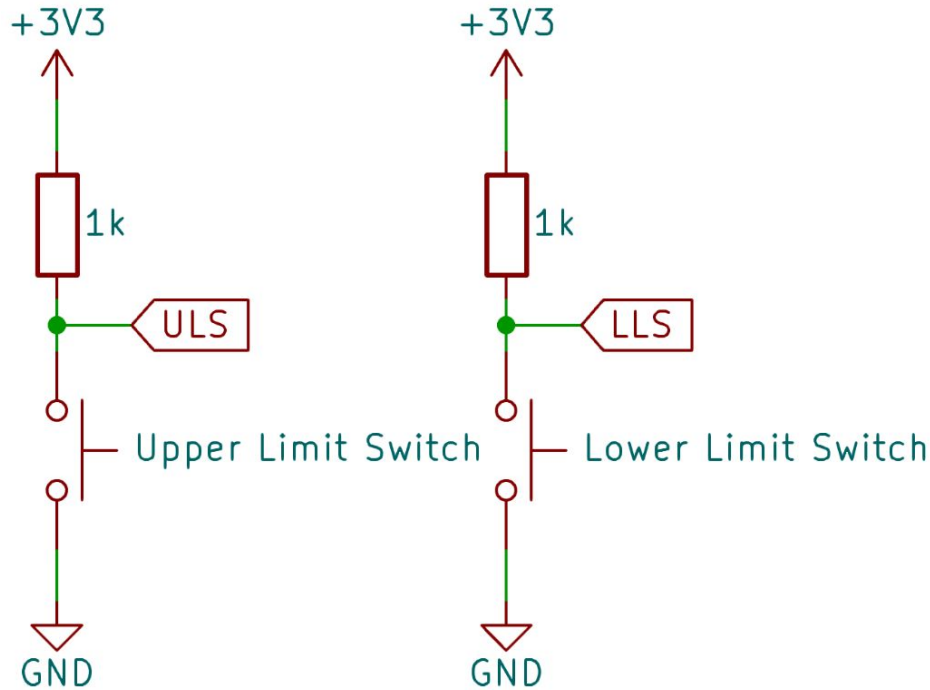

# Electrical Architecture

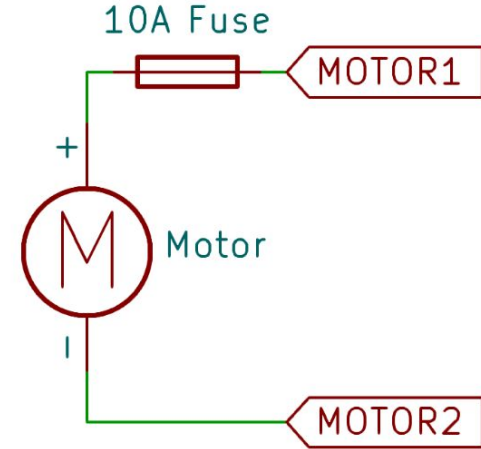

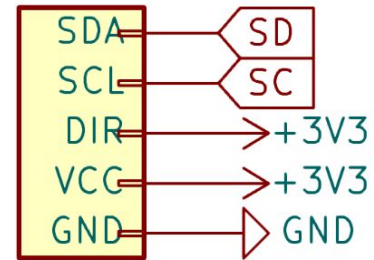

# Button Panel Circuit

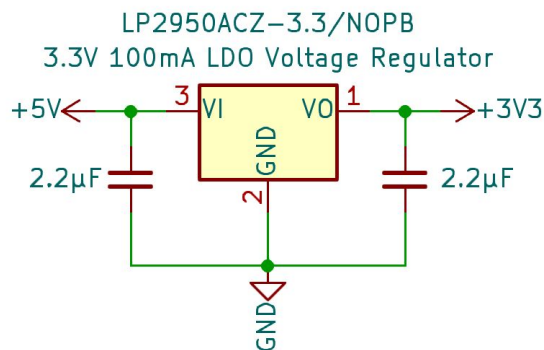

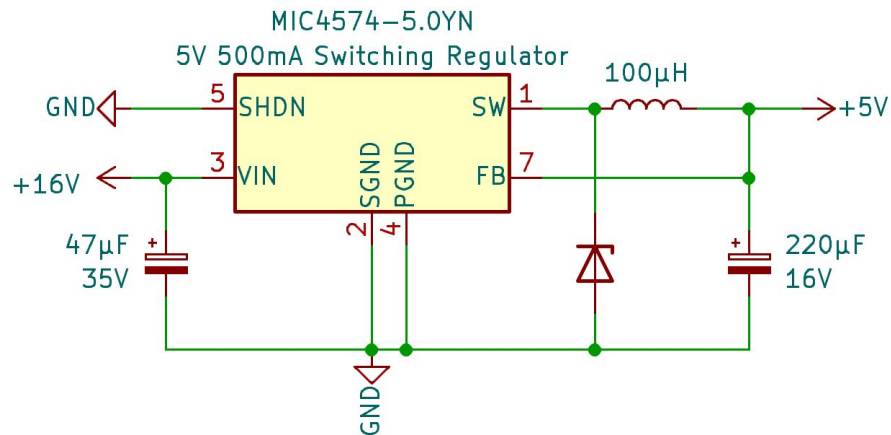

# Leg Module Circuit

AS5600 Encoder

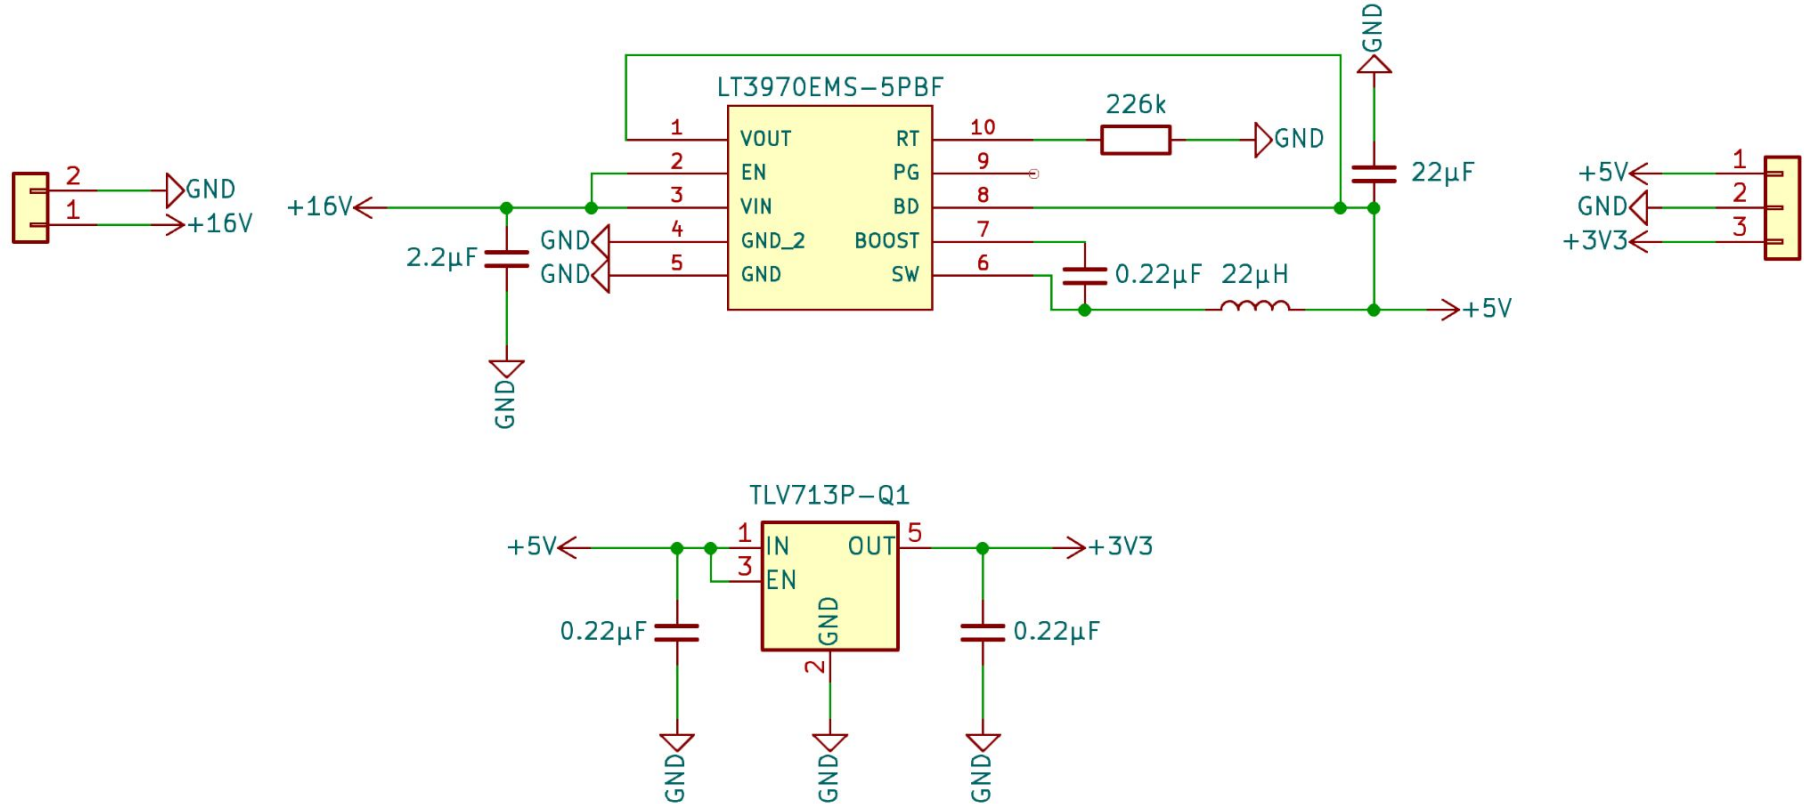

# Power Distribution Circuit

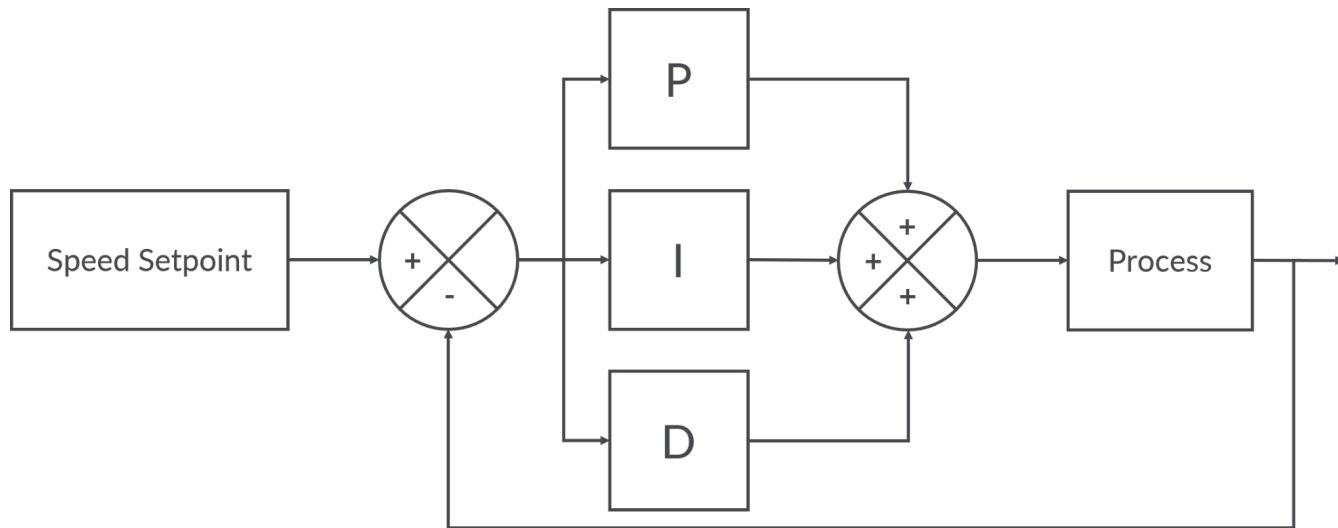

- Motors are “rated” for 12V
- 16V fixed power supply is for motors
  - Higher voltage is necessary for controls algorithm
  - Current is limited by software and fuses for overcurrent protection
- 5V is for powering ESP32 MCU
- 3.3V is for all logic

# SMD Power Distribution Circuit

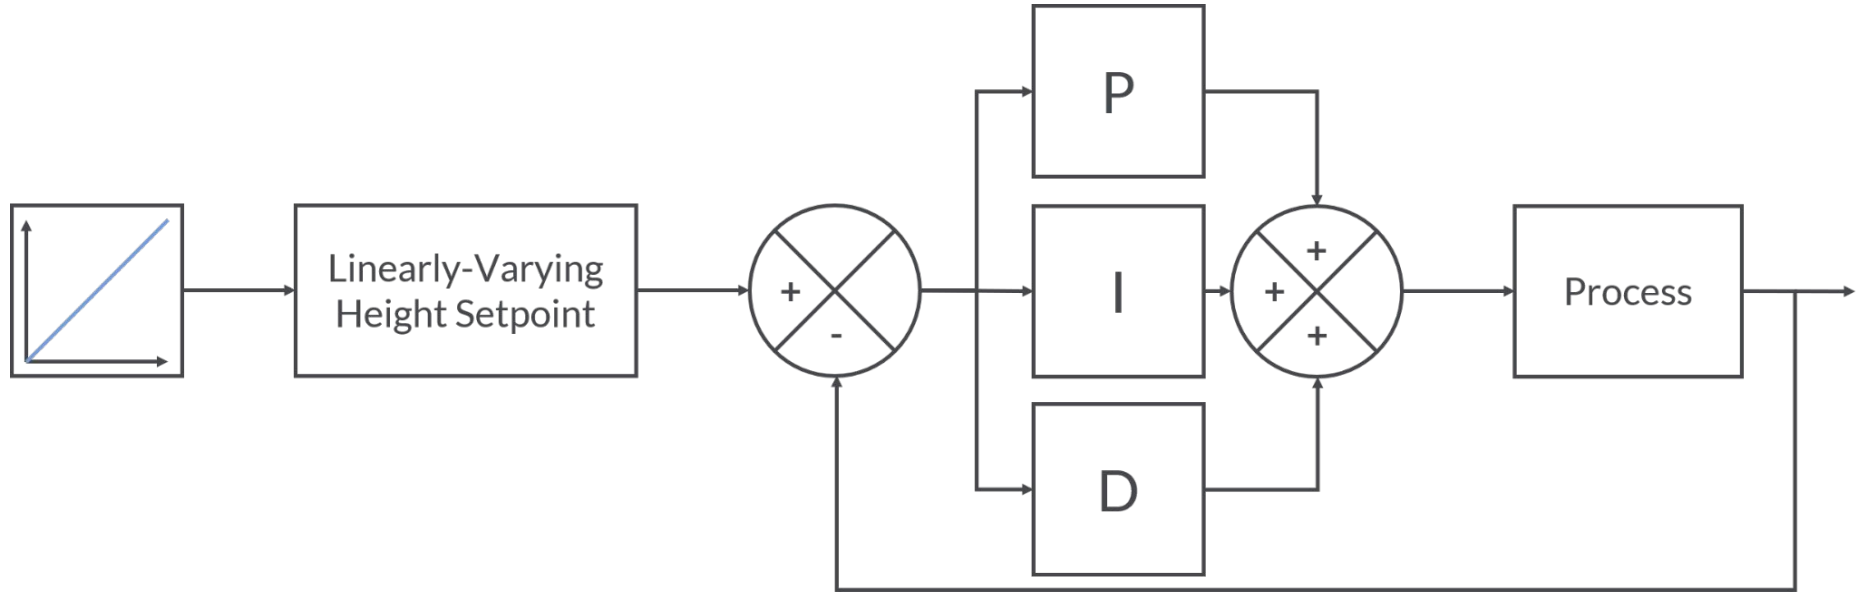

# The Control System Problem

- With the same voltage, the motors move at slightly different speeds
- Both **speed** and **height** need to be identical for all motors

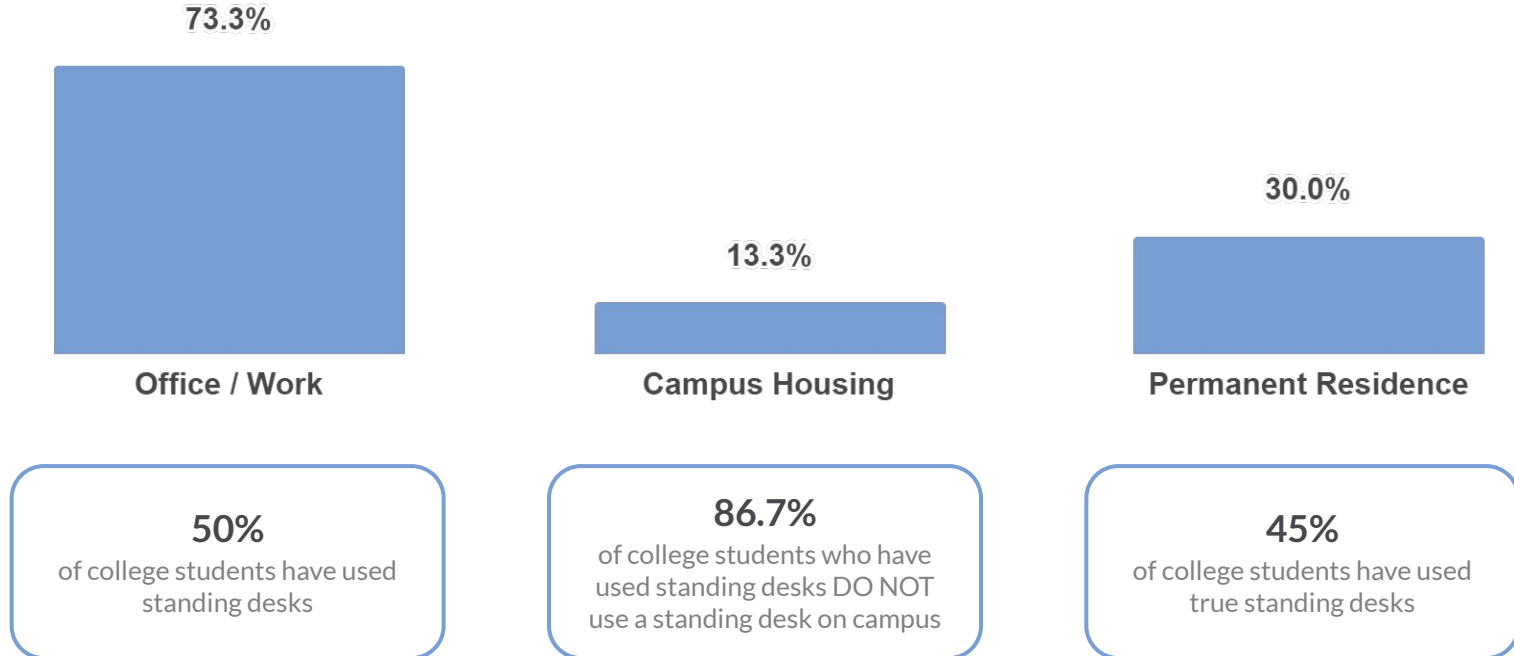

Naive Control System

# Improved Control System

# The Market

## Where College Students Use Standing Desks

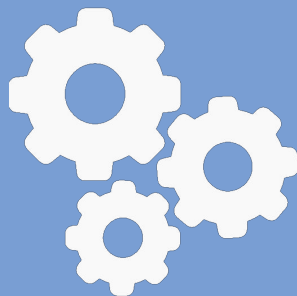

# Our Customers

## Business Owners

and other employees  
and employers who  
have a budget and are  
looking for lower cost  
solutions

## Artists

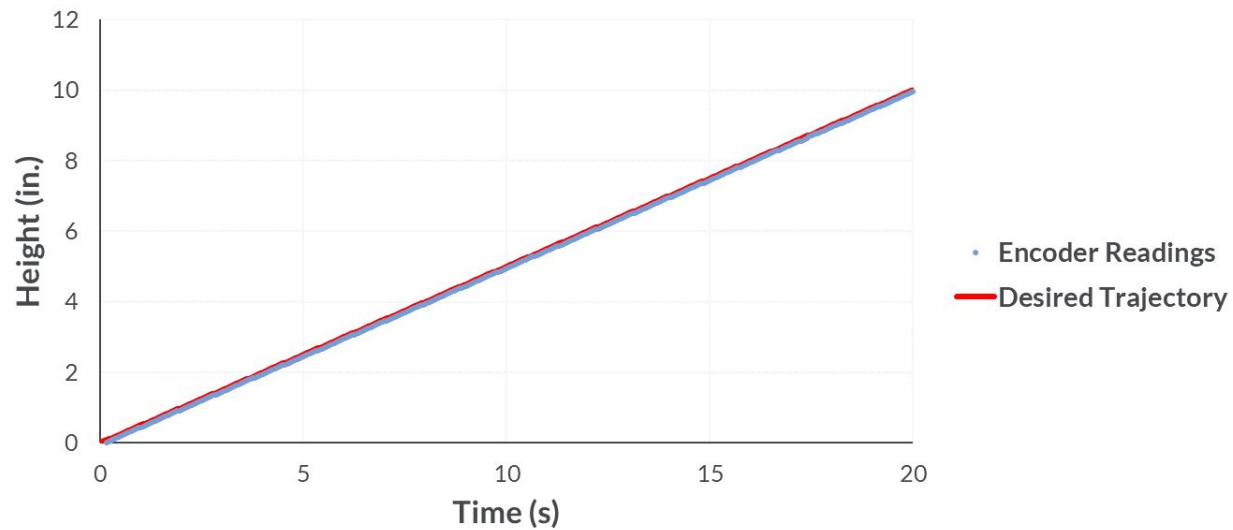

and other individuals  
who are looking for a  
retrofittable solution  
to keep their current  
setup

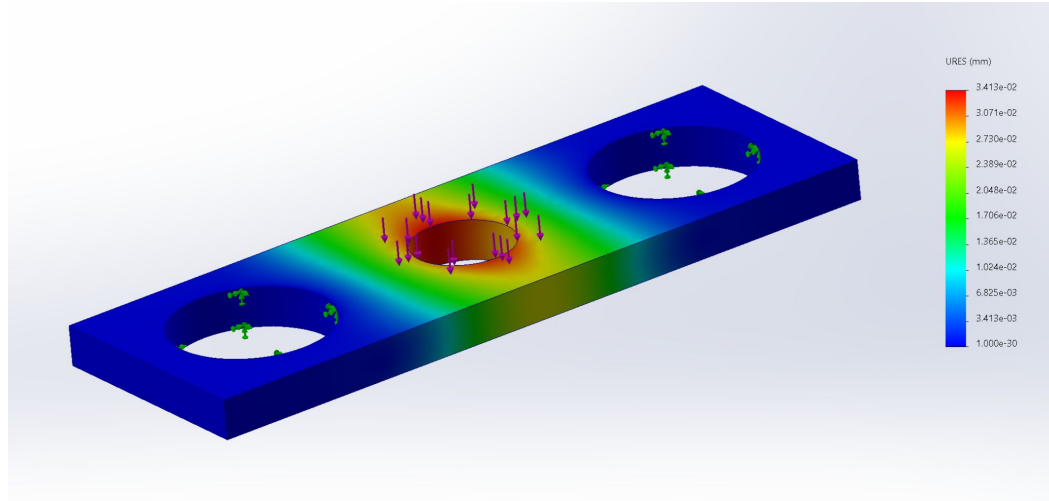

## College Students

and other individuals  
who do not have a  
permanent desk setup  
and are looking for a  
portable solution

## Controls Algorithm Trajectory

# Design, Engineering, Prototyping

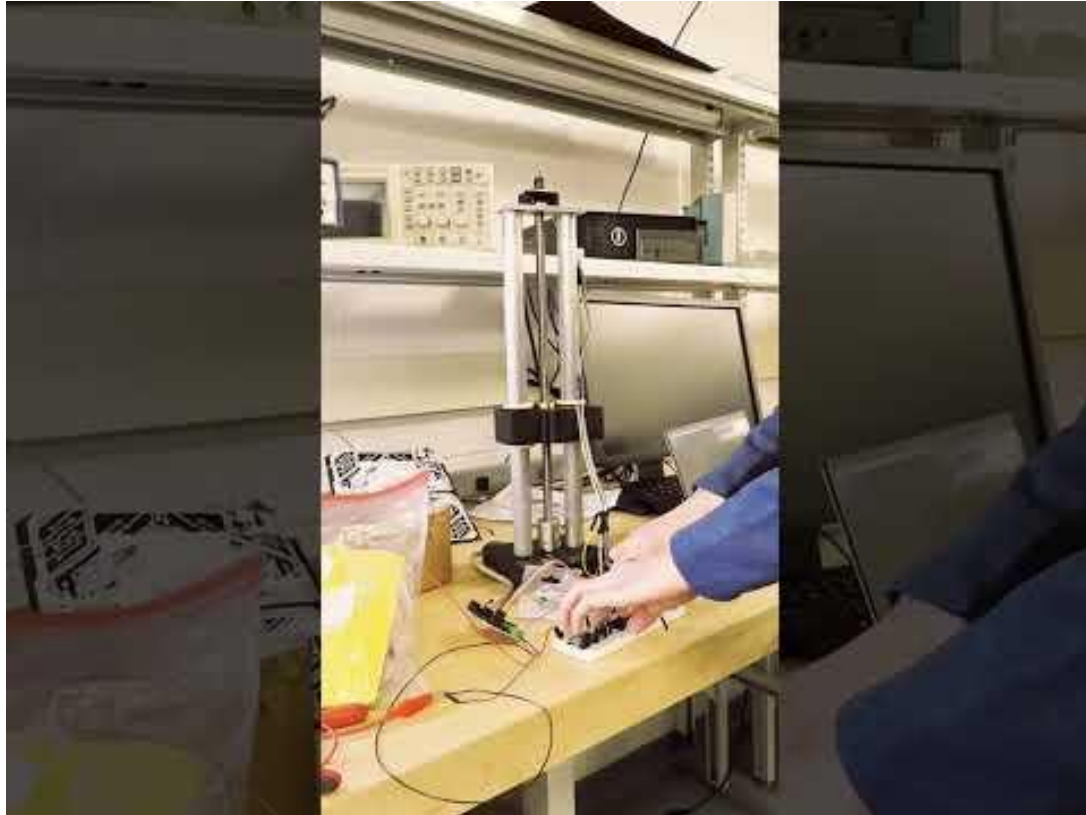

## Top Plate

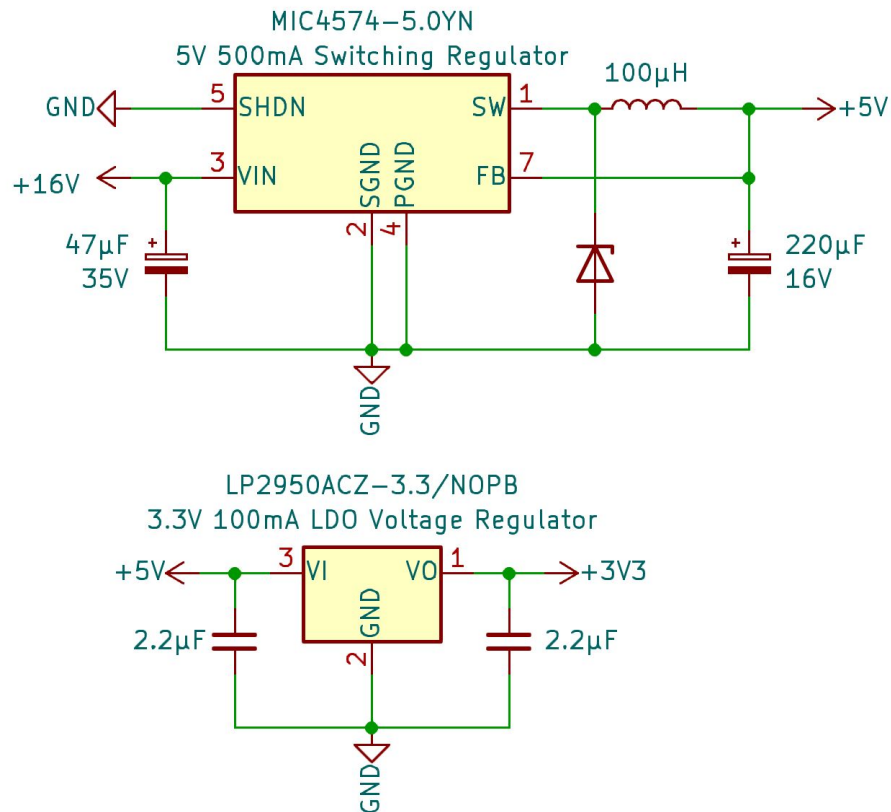

Stiffness limited part

Maximum load, deforms appropriately

# PD Control System in Action

# Power Distribution Circuit Explained

- Technically, 16V is required only for the motors and 3.3V can be used to power all other electronics and logic
- This circuit is designed with production in mind
- The ESP32 development board has a built in 5V to 3.3V LDO, but a production board would not
- To power the ESP32 and logic, a clean 3.3V source is required
- Switching regulator is efficient but noisy
- This circuit takes advantage of high efficiency switching regulator to reduce voltage and then uses an LDO linear regulator to produce a clean 3.3V source

# Current Requirements

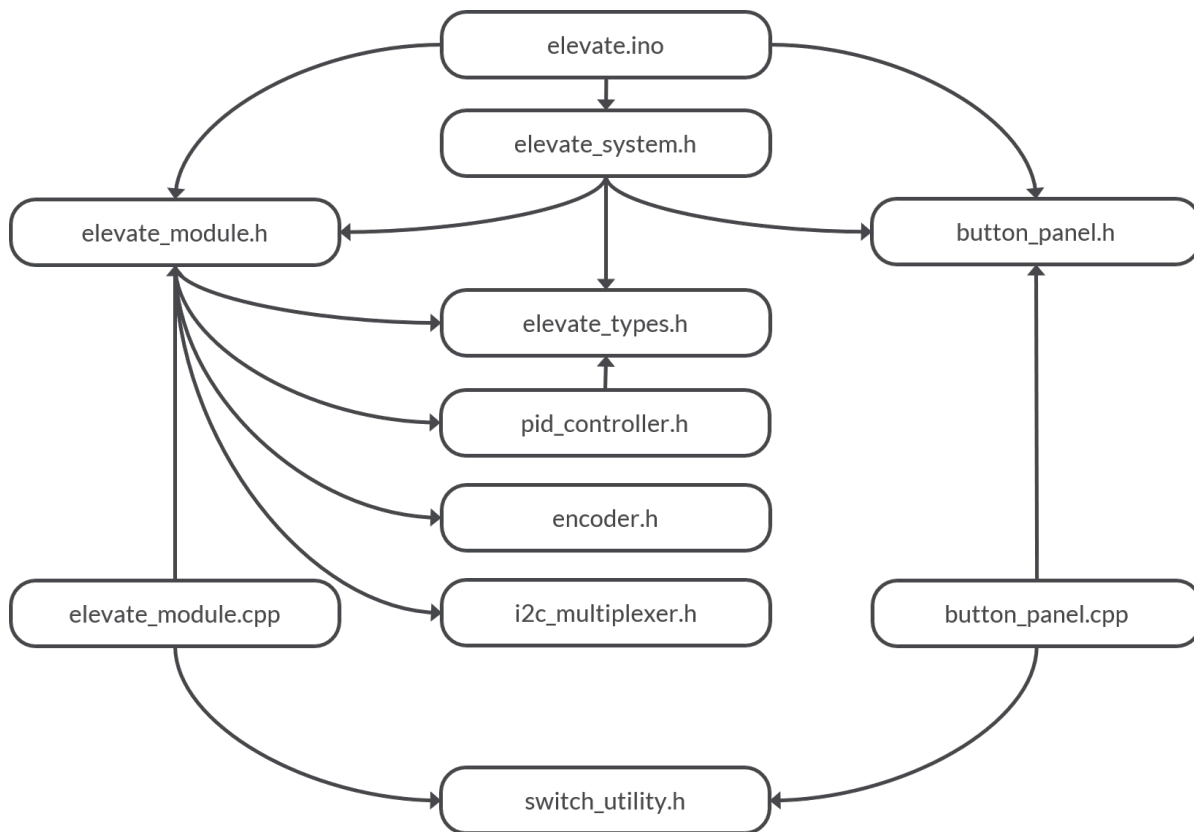

## 3.3V Electronics

Component	Max Current (mA)	Quantity
I2C Multiplexer	0.035	1
Hex Inverter	0.04	1
Switches	3.3	10
AS5600 Encoder	6.5	4
Motor Drivers	10	2
<b>Total</b>	<b>79.075</b>	

## 5V Electronics

Component	Max Current (mA)	Quantity
LDO Regulator	150	1
ESP32	120	1
<b>Total</b>	<b>270</b>	

# Software Dependency Graph

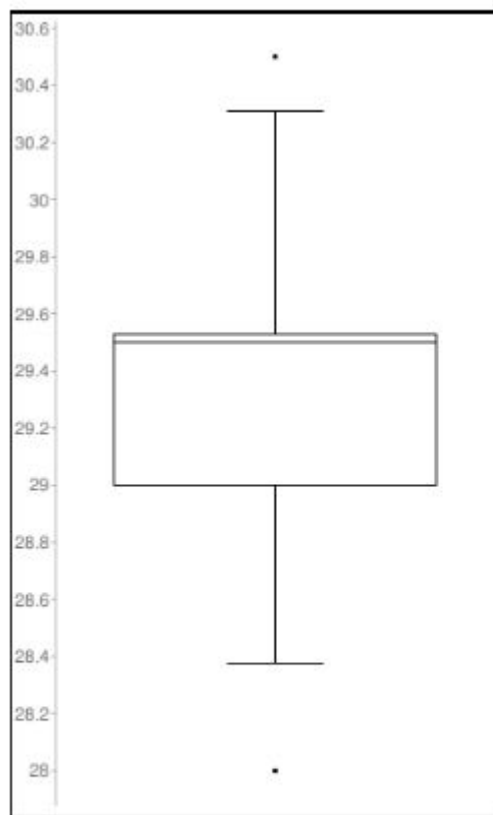

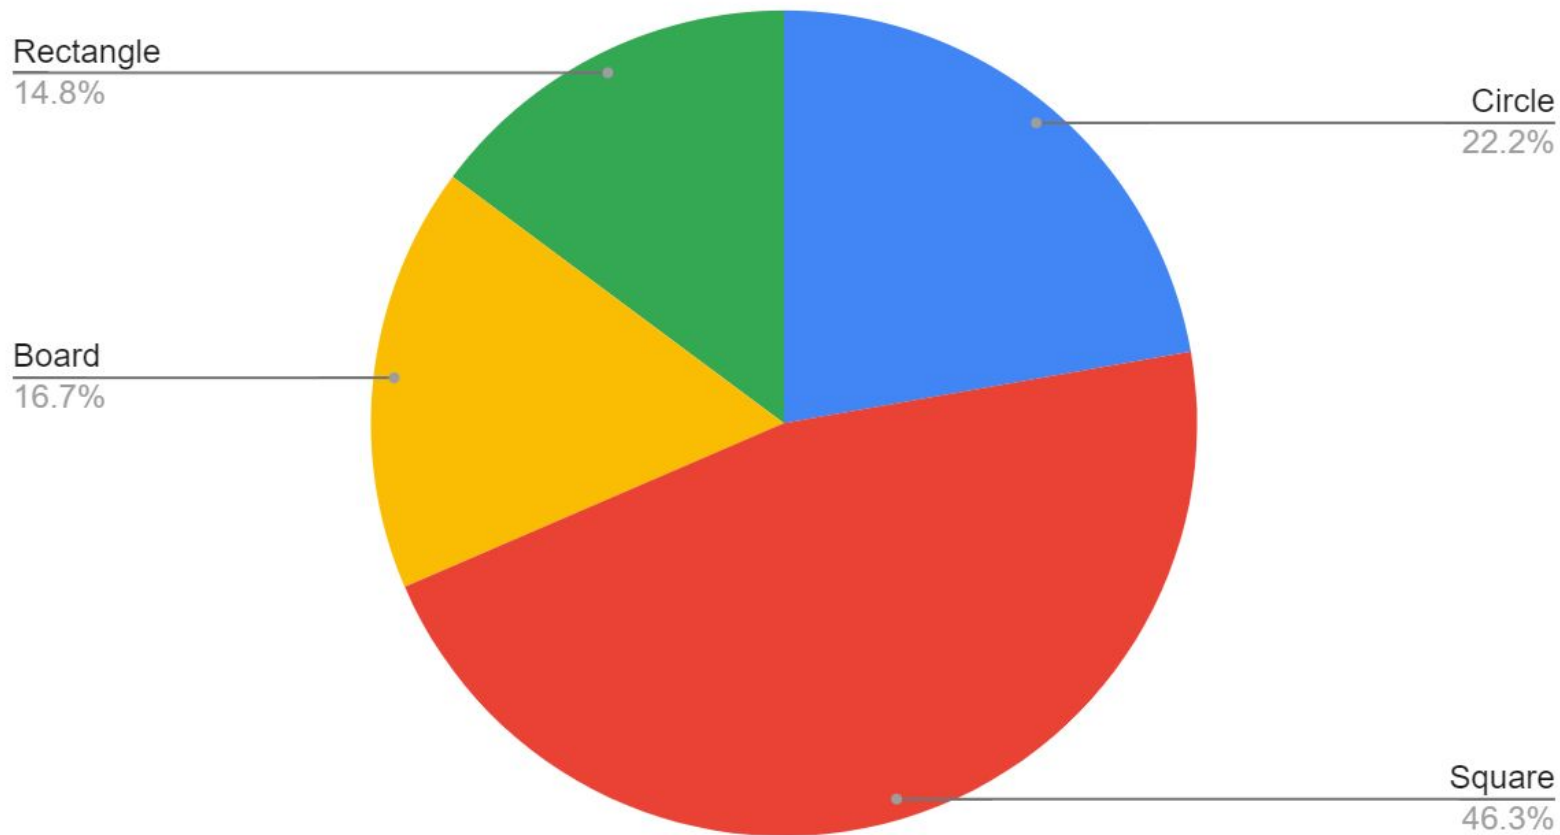

Figure 14. Boxplot of desk heights

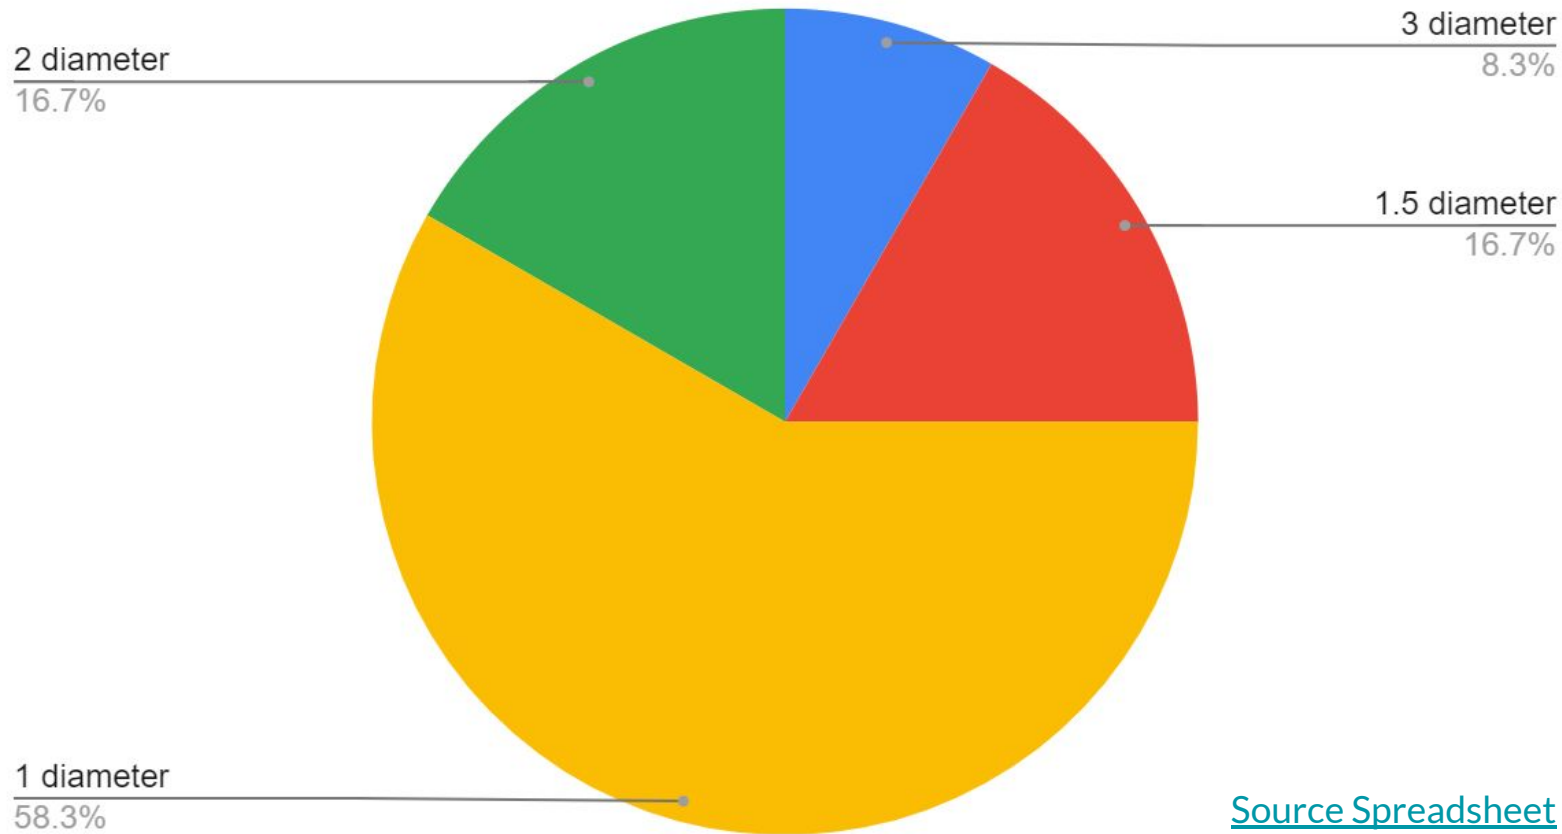

Minimum	min = 28
Maximum	max = 30.5
Range	R = 2.5
Size	n = 50
Sum	sum = 1463.8175
Mean	$\bar{x}$ = 29.27635
Median	$\tilde{x}$ = 29.5
Mode	mode = 29.5
Standard Deviation	s = 0.560108683
Variance	$s^2$ = 0.313721737
Mid Range	MR = 29.25
Quartiles	Quartiles: Q <sub>1</sub> --> 29 Q <sub>2</sub> --> 29.5 Q <sub>3</sub> --> 29.53
Interquartile Range	IQR = 0.53
Outliers	28, 30.5

# Sample of Leg Footprints

# Circle Legs

[Source Spreadsheet](#)

# Software Statistics

- 17 files
- 1279 lines of code
- >80% self-written

$$\Delta E = mgh \quad (1)$$

$$\Delta E = 136.1kg \times 9.81m/s^2 \times 0.0254m \quad (2)$$

$$\Delta E = 33.9J \quad (3)$$

$$P = \Delta E/T \quad (4)$$

$$P = 33.9J / 1s \quad (5)$$

$$P = 33.9W \quad (6)$$

$$P_{cr} = \frac{\pi^2 EI}{(KL)^2} \quad (1)$$

$$P_{cr} = \frac{\pi^2 \times 200000000000 \text{ Pa} \times \frac{\pi}{4} \times \left(\frac{0.00912}{2} \text{ m}\right)^4}{(0.65 \times 0.6096)^2} \quad (2)$$

$$P_{cr} = 4269 \text{ N} \quad (3)$$

$$P_{max} = 136.1 \text{ kg} \times 9.81 \text{ m/s}^2 \quad (4)$$

$$P_{max} = 1335.1 \text{ N} \quad (5)$$

$$\text{Safety Factor} = \frac{4269}{1335.1} \quad (6)$$

$$\text{Safety Factor} = 3.2 \quad (7)$$

$$\sigma = \frac{F}{A} \quad (1)$$

$$\sigma = \frac{136.1kg \times 9.81m/s^2}{\frac{\pi}{r} \times (0.00912m)^2} \quad (2)$$

$$\sigma = 20.4MPa \quad (3)$$

$$Safety\ Factor = \frac{350}{20.4} \quad (4)$$

$$Safety\ Factor = 17.2 \quad (5)$$

For this calculation, a desk with a weight of 100 lbs (45.4 kg) and a length of 24 in (0.6096 m) will be used.  $F$  is the horizontal force applied to the top of the desk in N,  $h$  is the desk height in m,  $W$  is the desk weight in N, and  $l$  is the length of the desk in m.

$$F \times h > W \times \frac{l}{2} \quad (1)$$

For a desk that is 29 in tall (0.7366 m), the tipping force is calculated.

$$F \times 0.7366 > 444.8 \times \frac{0.6096}{2} \quad (1)$$

$$F > 184.1N \quad (2)$$

For a desk that is 47 in tall (1.1938 m), the tipping force is calculated.

$$F \times 1.1938 > 444.8 \times \frac{0.6096}{2} \quad (1)$$

$$F > 113.6N \quad (2)$$
